

FORM

SOCIAL ROBOT CO-DESIGN CANVASES

What are the robot's outward qualities? If an existing robot is used, are its qualities modified?

Draw a picture

What does the robot look like?
Is it attached to something?
Does it move around?
Can its appearance be modified?

	☐ _____
	☐ _____
	☐ _____
	☐ _____

Web-based dashboard, ED desktop/tablet screens - no physical embodiment.

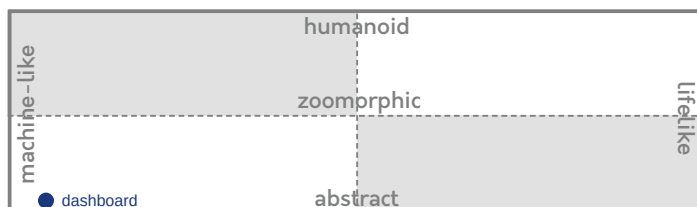

Appearance

Is the robot more machine or lifelike? Is it human-shaped, animal-shaped, or abstract?

TRADE-OFF:

Robots that appear more human and lifelike are expected to be more sophisticated in features.

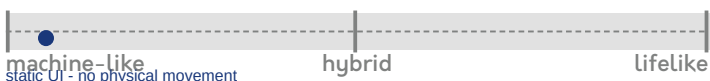

Size

How big is the robot?

Character of movement

What is the robot's movement like?

Voice & sounds

Does the voice have a gender or an age? What are pitch, speed and prosody like? Is the voice always the same?
Does the robot make sounds: music, "beep"s, animal noises?
When are these sounds heard?

No spoken voice. An optional short audible tone may accompany Level 1-2 critical alerts only, kept deliberately rare to avoid alarm fatigue. No music, routine "beeps" or animal-like sounds are used.

Mobility

Does the robot move across space? Does it move in place?

Not applicable in the physical sense - the software itself does not move. The dashboard runs on a fixed ED workstation or a tablet that staff may carry between bays.

Visual cues

Does the robot have expressions, lights, a screen or other visual elements?

Colour-coded urgency badges (red/orange/yellow/green), a confidence-score bar, icons for vitals and alerts, and clear on-screen notifications. No robotic facial expressions are used.

Touch & smell sensations

Is the robot soft or rough, warm or cold?
How does the robot smell?

Touch and smell are especially important in close interactions.

Not applicable - a purely digital interface with no touch or smell sensations of its own. The touchscreen supports simple tap and swipe interaction for the nurse.
