

FORM

SOCIAL ROBOT CO-DESIGN CANVASES

What are the robot's outward qualities? If an existing robot is used, are its qualities modified?

Draw a picture

What does the robot look like?
Is it attached to something?
Does it move around?
Can its appearance be modified?

Freestanding kiosk / compact robotic assistant, ED reception.

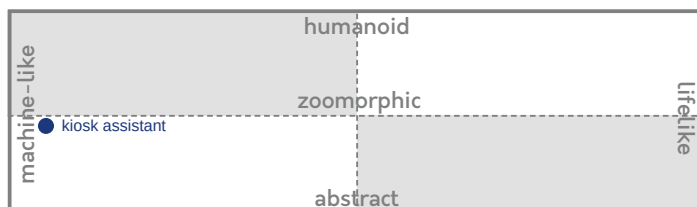

Appearance

Is the robot more machine or lifelike? Is it human-shaped, animal-shaped, or abstract?

TRADE-OFF:

Robots that appear more human and lifelike are expected to be more sophisticated in features.

Size

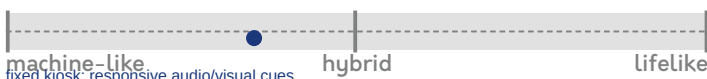

How big is the robot?

human-scale, adjustable height

Character of movement

What is the robot's movement like?

Voice & sounds

Does the voice have a gender or an age? What are pitch, speed and prosody like? Is the voice always the same?
Does the robot make sounds: music, "beep"s, animal noises?
When are these sounds heard?

Gender-neutral, calm, clear voice for guidance; consistent scripted prompts, used mainly for patients needing extra support. Short audio confirmation tones for successful submission and staff-assistance alerts; no music or animal-like sounds.

Mobility

Does the robot move across space? Does it move in place?

Fixed, freestanding kiosk (or compact robotic assistant) positioned at ED reception; does not move around the department.

Visual cues

Does the robot have expressions, lights, a screen or other visual elements?

Friendly on-screen visual cues, large buttons and plain-language prompts. Visual and audio indicators show system status, successful submission, and when staff assistance has been requested.

Touch & smell sensations

Is the robot soft or rough, warm or cold?
How does the robot smell?

Touch and smell are especially important in close interactions.

Smooth, easy-to-clean, hospital-grade touchscreen surface with rounded edges for safety; no smell. Ergonomic, wheelchair-accessible interaction height.
